

OEM Approvals

2016 marks the 20th year Glasurit refinish products receive GM Global Approval

January, 2016

Glasurit, the premium automotive refinish paint system in BASF's portfolio, is proud to continue our long-standing relationship with General Motors. Long considered a worldwide standard of excellence, Glasurit continues to deliver the productivity and quality that OEM's and discriminating collision repair businesses demand.

This global approval further demonstrates the outstanding quality for which Glasurit has been known for more than 100 years. Glasurit refinish systems meet or exceed the automotive refinishing standards established by GM and have passed the testing required by the GMW15406 Specification. Only refinish systems approved by GM, such as Glasurit's comprehensive system of perfectly matched products and processes from primer to clearcoat, can be used for GM warranty repairs.

For more information regarding Glasurit and GM's approved refinish systems and approval requirements, GM hosts the "Globally Approved Refinish Materials" booklet on their [website](#). The booklet is available in several languages in the Adobe Acrobat (.pdf) format. Access is easy and no login is required.

To view or download the document, go to <http://www.genuinegmparts.com/collision-auto-body-parts/auto-paint-touch-up> > Downloadable Guides and expand the "+" sign > Choose a language > and press "GO" to open the Globally Approved Refinish Materials booklet.

Glasurit refinish systems provide the ultimate blend of speed, ease of use, color match, and durability, ensuring that vehicles are refinished to pre-accident condition.
